BOSTON CENSUS 2000:

10 - SELECTED ECONOMIC CHARACTERISTICS:

Employment, Income and Poverty in Boston Neighborhoods

US Census 2000 SF3 Data

INTRODUCTION

This report is the 10th in a series of census reports focusing on selected socio-economic characteristics of Boston and its neighborhoods. It is derived from Summary File 3 (SF3) data from Census 2000 (1).

The Census Bureau has been releasing Census 2000 data sets in stages with increasing level of detail and varied purposes. The first release in March 2001 was the Census 2000 Redistricting Data (P.L. 94-171) Summary File in March of 2001. The P.L. 94-171 data contained only summary statistics for the total population, the population 18 years and over, 63 racial categories, and for Hispanic or Latino origin. This file provides the base data for the redistricting of US Congressional seats.

The next data released was in the summer of 2001. Summary File 1 (SF1), sometimes called the 100% count, contains counts of age, gender, housing units and occupancy, and household characteristics in addition to population and race.

The third set, Summary File 3 (SF3) upon which this report is based, was released in late 2002. SF3 data are based upon sampling by the Census and are sometimes called the long form data. This set is more comprehensive and detailed than SF1 and SF2 and describes such socio-economic data as income, employment status, ethnic background, and family structure.

The Policy Development and Research Division of the BRA has aggregated the raw Census data to each of the city's neighborhoods, as defined by the BRA's 16 Planning Districts. The neighborhood geographies used here are same as those used since 1970, thus permitting the study of change in neighborhoods over time.

1. All reports are available from the Policy Development and Research Department of the Boston Redevelopment Authority at the Research Desk on the 9th floor of Boston City Hall, or by calling 617-918-4269, or on-line at www.cityofboston.gov/bra/pdr.asp.

NOTES TO THE READER

1. The basic unit of aggregation is the Census Block Group and the source data are given in "P" Tables and "H" Tables in the SF3 Datasets released by the US Census Bureau.
2. In the aggregation of data, some of the Planning Districts where Block Groups straddle across their boundaries required minor approximation. Because of changes in the boundaries of Block Groups between 1990 and 2000, precise comparison of 1990 and 2000 data on neighborhoods is not possible.
3. At the end of the table title, whenever applicable, numbers within parentheses representing table numbers assigned by the US Census are given. A complete list of P and H Tables, which provide data at the Block Group level, is given in the Appendix. These table numbers will be useful in accessing table for different types of geography, such as a Census Tract or a county.
4. While variables are retained in their original form, some of their class intervals have been aggregated into fewer intervals to make the tables simpler.
5. Some tables have additions of derived data such as medians or per capita incomes.
6. For definition of terms, please see Census 2000 Glossary, which is published as a separate document (Report # 568) by the BRA .

Means of transportation from home to work is a function of the proximity of the employment centers of the city. Neighborhoods close to downtown such as Central, Back Bay-Beacon Hill, and Fenway-Kenmore have higher transit use and walking to work than driving. There is a marked difference among neighborhoods in the proportion of those working at home. Higher percentages are seen in relatively better-off neighborhoods such as Back Bay-Beacon Hill, Charlestown, Jamaica Plain and South End.
