i. INTRODUCTION

This report is part of a series of thematic reports prepared by the Research Department of the BRA using Census 2000 data to profile the key demographic, social, economic, and housing characteristics. While a variety of geographies such as neighborhoods, ZIP Code areas, Electoral Districts, Wards, etc. are of interest to data users, this set of reports provides a wealth of data for each of Boston's nine Electoral Districts. The Research Department has already published a number of reports and profiles on neighborhoods and Wards, all of which are available on our website(1).

Electoral Districts are critical geographies particularly for political campaigns and constituency services. While data on voting population are published as P.L.94-171 data file, the datasets are limited to total population, population 18 years and over, 63 racial categories, and Hispanic or Latino origin. They do not answer many of the basic questions about the electoral district such as the number of US citizens, recent residents from other states, median incomes or unemployment rates. Taking such questions into consideration, more in-depth information about the electoral district has been extracted from data files released after PL94-171, specifically from Census Summary Files 1 and 3 (SF1 & SF3), and presented in this report.

1. All reports are available from the Research Department of the Boston Redevelopment Authority on-line at www.cityofboston.gov/bra/pdr.asp or at the Research Desk on the 9th floor of Boston City Hall, or by calling 617-918-4269.

ii. NOTES TO THE READER

1. The data presented here are not for the exact Electoral District boundaries, but for very close approximate geographies. Such an approximation is necessary because the whole census tracts have to be used to get the full set of census variables. Boundaries of census tracts do not exactly line up with voting precincts that form the basic building blocks of Electoral Districts. As such, for exact population numbers and racial composition readers may use the PL94-171 data.

2. As can be seen from Maps 1 & 2, a significant number of census tracts straddle the Electoral District boundaries. In such cases, census tracts are allocated to Districts in which majority portion of the tract area is located. To better identify the set of census tracts that are aggregated to a specific District, they are given an identical shade/color.

3. The organization of the tables into thematic groups of DP-1, DP-2, DP-3 and DP-4 is almost identical to the Quick Tables published by the US Census Bureau in the American FactFinder website.

4. While variables are retained in their original form some of their class intervals have been aggregated into fewer intervals to make the tables simpler.

5. Wherever necessary, derived data such as medians have been computed for Electoral Districts.

6. For definition of terms please see Census Glossary which is published as a separate document (Report# 568) by the BRA or American FactFinder Glossary.

7. Harbor islands are used only for institutional facilities and the current institutional population of 640 is not included in the total electoral population.
