

# South Boston Transportation Action Plan: Goals and Priorities

The SBTAP developed these goals and priorities based on feedback gathered through a variety of channels from **elected officials, stakeholders and residents**. We synthesized this knowledge in the context of citywide goals established through past plans. The goals below provide a framework for developing recommendations:

## Safety of All Modes

Design for slow speeds, safe crossings, and safe turns at intersections.

## Access to Transportation

Connect all parts of the neighborhood to the city.

## Comfort and Reliability

Make sustainable modes of transportation a feasible option.

## Equitable Distribution of Space and Access

Serve all ages, abilities, and modes of transportation.

## Resilience

Proactively plan and implement a resilient transportation system.

## Accountability

Provide updates on implementation.
